On the request of M/S PNC-SPML-JV, Baduan, a Geophysical well Logging is conduct at above bore hole using IGS Well Logger on 03.Jan.2022.

A Deep bore hole was drilled 114 mtrs. depth, and Logged depth 114 mtrs. at above site. Was drilled by M/S PNC-SPML-JV, Baduan.

On the request of M/S PNC-SPML-JV, Baduan, a Geophysical well Logging is conduct at above bore hole using IGS Well Logger on 03.Jan.2022.

Logging Parameters - Self potential, short normal (N-16), Long Normal (N-64), Lateral.

Details of major equifer formations explored from logging of bore hole combined with the study of Stratigraphic Chart prepared from drill cuttings are given in the following table:-

Conclusions and Recommendations :-

1. The Lithology broadly tallies with that of drill cutting strata chart.
2. The zones marked with asterisk (*) appear to be aquifer zones for possible development of tube well.
3. The Quality of water is expected Good.
4. Expected discharge is 800 to 900 L.P.M.
5. It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
6. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.
