Ground Water Survey Consultancy

Ground Water Survey Consultancy

S.No.	Depth range(m)	Thickness(m)	Lithology	Expected Water Quality
1.	0 - 5	5	Surface soil	Water Quality
2.	5 - 18	13	Dry sand	Good
3.	18 - 36	18	Clay Kanakar	Good
4.	36 - 47	10	Medium sand	Good
5.	47 - 65	18	Clay Kanakar	Good
6.	65 - 80*	15	Medium Sand & Kanakar	Good
7.	80 - 85	5	Clay Kanakar	Good
8.	85 - 100*	15	Medium Sand	Good
9.	100 - 106	6	Clay Kanakar	Good
10.	106 - 112*	6	Fine to Medium sand	Good
11.	112 - 120	8	Clay Kanakar	Good

of Strata Chart prepared from drill cuttings are given in the following table:-

Details of major features explored from logging of bore hole combined with the study

Logging Parameters - Self potential, shot normal (N-16), Long Normal (N-64), Latera

at above bore hole using IGS Well Logger on 10.May.2022.

On the request of M/S PNC-SML-JV, Badanu, a Geophysical well Logging is conduct

above site. Was drilled by M/S PNC-SML-JV, Badanu.

A Deep bore hole was drilled 121 mtrs. depth, and Logged depth 120 mtrs. at

Introduction :

JAL JIVAN MISSION
UNDER
GRAM PANCHAYAT- BHAVIPUR, BLOCK- BISAUJI, DISTT.- BADANU

REPORT ON GEOPHYSICAL WELL LOGGING

AT

Conclusions and Recommendations:

1. The Lithology broadly tallies with that of drill cutting starta chart.
2. The zones marked with asterisk (*) appear to be aquifer zones for possible development of tube well.
3. The Quality of water is expected Good.
4. Expected discharge is 800 to 900 L.P.M.
5. It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
6. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.
