at above bore hole using GIS Well Logger on 29-Sep-2023.

On the request of M/S PNC-SPM-L-JV, Badauan, a Geophysical well Logging is conduct

above site. Was drilled by M/S PNC-SPM-L-JV, Badauan.

A Deep bore hole was drilled 140 mts. depth. and Logged depth 140 mts. at

Conclusions and Recommendations :-

1. The Lithology broadly tallies with that of drill cutting strata chart.
2. The zones marked with asterisk (*) appear to be aquifer zones for possible development of tube well.
3. The Quality of water is expected Medium.
4. It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
5. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.
