of Stratigraphic Chart prepared from drill cuttings are given in the following table:-

Details of major aquifer formations explored from logging of bore hole combined with the study Logging Parameters - Self Potential, shot normal (N-16), Long Normal (N-64), Laterals.

Logging in the above bore hole using GIS Well Logger on 05 Nov 2023.

On the request of M/S PNC-SML-JV, Badanu, a Geophysical well

at above site. Was drilled by M/S PNC-SML-JV, Badanu.

A Deep bore hole was drilled 130 mtrs. depth. and Logged depth 130 mtrs.

Conclusions and Recommendations :-

1. The Lithology broadly tallies with that of drill cutting strata chart.
2. The zones marked with asterisk (*) appear to be aquifer zones for possible development of tube well.
3. The Quality of water is expected Medium.
4. It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
5. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.
