of Stratigraphic Chart prepared from drill cuttings are given in the following table:-

Details of major aquifer formations explored from logging of bore hole combined with the study

Logging Parameters - Self potential, short normal (N-16), Long Normal (N-64), Laterals

at above bore hole using IGS Well Logger on 04.Oct.2023.

On the request of M/S PNC-SPML-JV, Badanu, a Geophysical well Logging is conduct

above site. Was drilled by M/S PNC-SPML-JV, Badanu.

A Deep bore hole was drilled 140 mtrs. depth. and Logged depth 140 mtrs. at

1. The Lithology broadly tallies with that of drill cutting strata chart.
2. The zones marked with asterisk (*) appear to be aquifer zones for possible development of tube well.
3. The Quality of water is expected Medium.
4. It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
5. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.
