REPORT ON GEOPHYSICAL WELL LOGGING AT

GRAM PANCHAYAT- SAMDA POWER HOUSE, BLOCK- SAHASWAN,
DISTT- BADAUN
UNDER
JAL JIVAN MISSION

Introduction :

A Deep bore hole was drilled 140 mtrs. depth. and Logged depth 140 mtrs. at above site. Was drilled by M/S PNC-SPML-JV, Badaun.

On the request of M/S PNC-SPML-JV, Badaun. a Geophysical well Logging is conduct at above bore hole using IGIS Well Logger on 28.Sep.2023.

Logging Para meters - Self potential, short normal (N-16), Long Normal (N-64), Lateral. Details of major aquifer formations explored from logging of bore hole combined with the study of Strata Chart prepared from drill cuttings are given in the following table:-

S.No.	Depth range(m)	Thickness(m)	Lithology	Expected Water Quality
1.	0 - 5	5	Surface soil	
2.	5 - 14	9	Fine to Medium sand	
3.	14 - 20	6	Clay kankar	
4.	20 - 35	15	Medium sand	Medium
5.	35 - 48	13	Clay kankar	
6.	48 - 55*	7	Medium sand	Medium
7.	55 - 60	5	Clay kankar	
8.	60 - 69*	9	Medium sand	Medium
9.	69 - 92	23	Clay kankar	
10.	92 - 111*	19	Medium sand	Medium
11.	111 - 138	27	Clay kankar	
12.	138 - 140	2	Medium sand	Medium

Ground Water Surveys Consultancy

Conclusions and Recommendations :-

1. The Lithology broadly tallies with that of drill cutting strata chart.
2. The zones marked with asterisk (*) appear to be aquifer zones for possible development of tubewell.
3. The Quality of water is expected Medium.
4. It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
5. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.
