at above bore hole using IGS Well Logger on 07.Nov.2023.

On the request of M/S PNC-SPMI-JV, Badanu, a Geophysical well Logging is conduct

above site. Was drilled by M/S PNC-SPMI-JV, Badanu.

A Deep bore hole was drilled 130 mtrs. depth, and Logged depth 127 mtrs. at

Conclusions and Recommendations :-

Ground Water Survey Consultancy

Geophysicist

5. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.

4. It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.

3. The Quality of water is expected Medium.

2. The zones marked with asterisk (*) appear to be aquifer zones for possible development of tube well.

1. The Lithology broadly tallies with that of drill cutting strata chart.
