REPORT ON GEO-PHYSICAL RESISTIVITY LOGGING OF BOREHOLE

At

Village: Gaundi
Hapur, Uttar Pradesh

Introduction:

A deep borehole 145m (476 Feet) was drilled by working agency *M/s. L.C.Infra Projects Private Limited, Hapur, U.P.* as a part of their scope of work of development of tubewell under Jal Jeevan Mission Project of SWSM, GGWC conducted a Geophysical Resistivity logging in the above borehole using IGIS's Logger dated on 29th September, 2022

Based on the interpretation of the Logging, the following litho logy has been inferred which tallies fairly well with the well-site litho-log based on mud-wash samples.

<i>Depth in m</i>	<i>Expected Litholog</i>	<i>Expected Quality</i>
0 - 3	Surface Soil	
3 - 6	Sandy clay	
6 - 18	Fine sand	
18 - 25	Sandy clay	
25 - 39*	Medium sand	Good
39 - 42	Clay	
42 - 46*	Fine sand	Good
46 - 54	Clay	
54 - 90*	Medium sand	Good
90 - 98	Sandy clay	
98 - 116*	Medium sand	Good
116 - 121	Clay	
121 - 131*	Medium sand	Good
131 - 145	Clay	

Conclusions and Recommendations:

1. The litholog inferred broadly tallies with that of the well-site litholog.
2. The zones marked with asterisk (*) appear to be Aquifer Zones for possible development of tubewell.
3. As per thickness of the Aquifer the expected discharge is 80,000 LPH to 90,000 LPH.
4. Water Level is 18 m below ground level.
5. The Quality of water is Good. However, it is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
6. The shallow aquifers are also recommended for development to get good quantity of water.
7. *All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.*
