## REPORT ON GEO-PHYSICAL RESISTIVITY LOGGING OF BOREHOLE

At  
**Village: Baharampur Badli**  
 Simbhaoli, Hapur, Uttar Pradesh

**Introduction:**

A deep borehole 135 (442 Feet) was drilled *M/s. L.C Infra Projects Private Limited, Hapur, U.P.*, as a part of their scope of work of development of tubewell under Jal Jeevan Mission project of SWSM, GGWC conducted a Geophysical Resistivity logging in the above bore hole using IGIS's Logger dated on 16<sup>th</sup> April 2024.

Based on the interpretation of the Logging, the following litho logy has been inferred which tallies fairly well with the well-site litho-log based on mud-wash samples.

<i>Depth in m</i>	<i>Expected Litholog</i>	<i>Expected Quality</i>
0 - 3	Surface Soil	
3 - 18	Fine sand	
18 - 25*	Medium to fine sand	Good
25 - 30	Clay	
30 - 45*	Medium to fine sand	Good
45 - 55	Clay kankar	
55 - 108*	Medium sand	Good
108 - 111*	Fine sand	Good
111 - 115*	Medium sand	Good
115 - 127	Sandy clay	
127 - 135	Clay kankar	

*Conclusions and Recommendations:*

1. The litholog inferred broadly tallies with that of the well-site litholog.
2. The zones marked with asterisk (\*) appear to be Aquifer Zones for possible development of tubewell.
3. As per the thickness of the Aquifer the expected discharge is 60,000 LPH to 80,000 LPH.
4. Water Level is 17 m below ground level.
5. The Quality of water is good. However, it is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or any other use.
6. The shallow aquifers are also recommended for development to get a good quantity of water.
7. *All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.*
