REPORT ON GEO-PHYSICAL RESISTIVITY LOGGING OF BOREHOLE

At
Village: Fakarpur-Shahpur
Khekra, Baghpat, Uttar Pradesh

Introduction:

A deep borehole 146 (479 Feet) was drilled *M/s. LC Infra Projects Limited, Ahmedabad*, On the request of *M/s. LC Infra Projects Limited, Ahmedabad*, GGWC conducted a Geophysical Resistivity logging in the above borehole using IGIS's Logger dated on 17th March, 2023

Based on the interpretation of the Logging, the following litho logy has been inferred which tallies fairly well with the well-site litho-log based on mud-wash samples.

<i>Depth in m</i>	<i>Expected Litholog</i>	<i>Expected Quality</i>
0 - 3	Surface Soil	
3 - 14	Fine sand	
14 - 31*	Fine sand	Good
31 - 69*	Medium sand	Good
69 - 78	Sandy clay	
78 - 86*	Medium sand	Good
86 - 99	Sandy clay	
99 - 107*	Medium sand	Good
107 - 110	Clay	
110 - 116*	Fine sand kankr	Good
116 - 136	Sandy clay	
136 - 146	Clay kankar	

Conclusions and Recommendations:

1. The litholog inferred broadly tallies with that of the well-site litholog.
2. The zones marked with asterisk (*) appear to be Aquifer zones for possible development of tubewell.
3. As per thickness of the Aquifer the expected discharge is 40,000 LPH to 50,000 LPH.
4. Water Level is 16 m below ground level.
5. The Quality of water is good. However, it is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
6. The shallow aquifers are also recommended for development to get good quantity of water.
7. *All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.*
