REPORT ON GEOPHYSICAL WELL LOGGING AT

GRAM PANCHAYAT- HARPLA, BLOCK- NIGOHI, DISTT- SHAHJAHANPUR UNDER JAL JIVAN MISSION

Introduction:

A Deep bore hole was drilled 140 mtrs. depth. and Logged depth 140 mtrs. at above site. Was drilled by M/S NCC Ltd., Shahjahanpur.

On the request of M/S NCC Ltd., Shahjahanpur. a Geophysical well Logging in the above bore hole using IGIS Well Logger on 17.Jan.2023.

Logging Para meters - Self potential, short normal (N-16), Long Normal (N-64), Lateral. Details of major aquifer formations explored from logging of bore hole combined with the study of Strata Chart prepared from drill cuttings are given in the following table:-

S.No.	Depth range(m)	Thickness(m)	Lithology	Expected Water Quality
1.	0 - 5	5	Surface soil	water Quarity
2.	5 - 15	10	Clay kankar	
3.	15 - 30	15	Fine to Medium sand	Good
4.	30 - 37	7	Clay kankar	Good
5.	37 - 63*	26	Medium sand	Good
6.	63 - 68	5	Clay kankar	Good
7.	68 - 76*	8	Medium sand	Good
8.	76 - 83	7	Clay kankar	Good
9.	83 - 87*	4	Medium sand	Good
10.	87 - 90	3	Clay kankar	Good
11.	90 - 106*	16	Medium sand	Good
12.	106 - 111	5 .	Clay kankar	
13.	111 - 115*	4	Medium sand	Good
14.	115 - 117	2	Clay kankar	
15.	117 - 125*	8	Fine to Medium sand	Good
16.	125 - 140	15	Clay kankar	1 2004

Conclusions and Recommendations :-

- The Lithology broadly tallies with that of drill cutting strata chart.
- 2. The zones marked with asterisk (*) appear to be aquifer zones for possible development of tubewell.
- The Quality of water is expected Good.
 - 4. It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
 - 5. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.
