REPORT ON GEOPHYSICAL WELL LOGGING AT

GRAM PANCHAYAT- JADOPUR KALAN, BLOCK- KHUTAR DISTT- SHAHJAHANPUR UNDER JAL JIVAN MISSION

Introduction:

A Deep bore hole was drilled 140 mtrs. depth. and Logged depth 135 mtrs. at above site. Was drilled by M/S NCC Ltd., Shahjahanpur.

On the request of M/S NCC Ltd., Shahjahanpur. a Geophysical well Logging in the above bore hole using IGIS Well Logger on 01.May.2022.

Logging Para meters - Self potential, short normal (N-16), Long Normat (N-64), Lateral. Details of major equifer formations explored from logging of bore hole combined with the study of Strata Chart prepared from drill cuttings are given in the following table:-

S.No.	Defth range(m)	Thickness(m)	Lithology	Expected Water Quality
1.	0 - 5	5	Surface soil	Water Quarty
2.	5 - 33	28	Clay kankar	0
3.	33 - 42	9	Medium sand	Good
4.	42 - 48	6	Clay kankar	Coou
5.	48 - 98*	50	Fine to Medium sand	Good
0.	98 - 106	8	Clay kankar	- 5000
1.	106 - 127*	21	Medium sand	Good
8.	127 - 135	8	Clay kankar	

Conclusions and Recommendations :-

- 1. The Lithology broadly tallies with that of drill cutting starta chart.
- 2. The zones marked with asterisk (*) appear to be aquifer zones for possible development of tubewell.
- 3. The Quality of water is expected Good.
- 4. Expected discharge is 1000 to 1100 L.P.M.
- It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
- 6. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.
