# REPORT ON GEOPHYSICAL WELL LOGGING AT

GRAM PANCHAYAT- KHUTIA, BLOCK- GANGESHWARI, DISTT- AMROHA  
UNDER  
JAL JIVAN MISSION

## Introduction :

A Deep bore hole was drilled 140 mtrs. depth. and Logged depth 140 mtrs. at above site. Was drilled by M/S PNC-SPML-JV, Moradabad.

On the request of M/S PNC-SPML-JV, Moradabad, a Geophysical well Logging in the above bore hole using IGIS Well Logger on 28 Jan.2023.

Logging Para meters - Self potential, short normal (N-10), Long Normal (N-04), Lateral. Details of major equifer formations explored from logging of bore hole combined with the study of Strata Chart prepared from drill cuttings are given in the following table:-

## Conclusions and Recommendations

1. The lithology broadly ~~aligns~~ with that of drill cutting data chart
2. The zones marked with asterisk (\*) appear to be aquifer zones for possible development of tubewell.
3. The Quality of water is expected Good.
4. It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
5. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.
