Ground Water Consultancy

REPORT ON GEOPHYSICAL WELL LOGGING AT

GRAM PANCHAYAT- RAGHANIYA TW NO- 2, BLOCK- SASNI, DISTT- HATHRAS UNDER JAL JIVAN MISSION

Introduction:

A Deep bore hole was drilled 110 mtrs. depth. and Logged depth 110 mtrs. at above site. Was drilled by M/s Braj Gopal Construction, Hathras.

On the request of M/s Braj Gopal Construction, Hathras. a Geophysical well Logging in the above bore hole using IGIS Well Logger on 18.Nov.2024.

Logging Para meters - Self potential, short normal (N-16), Long Normal (N-64), Lateral. Details of major Aquifer formations explored from logging of bore hole combined with the study of Strata Chart prepared from drill cuttings are given in the following table:-

Mud Resistivity = 16.78 Ohms.

Drilling Water Resistivity = 17.14 Ohms.

Approx Water Level = 18 Mtr.

S.No.	Depth range(m)	Thickness(m)	Lithology	Expected Water Quality
1.	0 - 5	5	Surface soil	No.
2.	5 - 17	12	Dry sand	
3.	17 - 21	4	Clay kankar	
4.	21 - 27	6	Medium sand	Medium
5.	27 - 38	11	Clay kankar	
6.	38 - 45*	7	Medium sand	Medium
7.	45 - 51	6	Clay kankar	
8.	51 - 57	6	Sand & kankar	Medium
9.	57 - 61	4	Clay kankar	
10.	61 - 77	16	Fine to Medium sand	Medium
11.	77 - 86	9	Clay kankar	
12.	86 - 95	9	Fine sand & kankar	Medium
13.	95 - 110	15	Clay kankar	

Conclusions and Recommendations :-

- 1. The Lithology broadly tallies with that of drill cutting strata chart.
- 2. The zones marked with asterisk (*) appear to be aquifer zones for possible Development of tube well.
- 3. The Quality of water is expected Medium.
- 4. It is recommended to have a chemical and bacteriological analysis of the water sample before using it for human consumption or for any other use.
- 5. All projections and recommendations are subject to the inherent limitations of the technique employed and there could be variations as the underground conditions are not always amenable to physical interpretations.
