REPORT OF THE  
LAND USE AND MANAGEMENT  
STUDY FOR THE  
SANDY CREEK WATERSHED

**EXECUTIVE SUMMARY**

The purpose of this study was to evaluate the current land use and management practices in the Sandy Creek Watershed and to identify opportunities for improvement. The study was conducted over a period of six months and involved a series of field visits, interviews with local landowners and managers, and a review of existing data and maps. The results of the study indicate that there are several areas where land use and management practices could be improved, including the need for better riparian zone management, increased riparian zone connectivity, and improved riparian zone habitat quality. The study also identified several opportunities for improvement, including the need for better riparian zone management, increased riparian zone connectivity, and improved riparian zone habitat quality.
