Dr. S. R. Srinivasan
Principal, Sri Sankar College of Arts and Sciences
Tamil Nadu

Write a detailed note about Antibiotic in about 100 words. Also give some examples of antibiotics used in medicine. (10 marks)

Antibiotic / Antibiotic / function / kill / kill / kill

Antibiotic

Antibiotics are substances that kill or inhibit the growth of bacteria. They are used to treat bacterial infections. Some common examples of antibiotics are penicillin, ampicillin, and tetracycline. Antibiotics work by interfering with the ability of bacteria to reproduce. Some antibiotics kill bacteria, while others simply stop them from growing. Antibiotics are used to treat a wide variety of bacterial infections, including pneumonia, streptococcal infections, and urinary tract infections. It is important to use antibiotics correctly and to complete the full course of treatment to avoid antibiotic resistance.

Antibiotics are substances that kill or inhibit the growth of bacteria. They are used to treat bacterial infections. Some common examples of antibiotics are penicillin, ampicillin, and tetracycline. Antibiotics work by interfering with the ability of bacteria to reproduce. Some antibiotics kill bacteria, while others simply stop them from growing.
